Machine Test – Day 3 Shell Scripting Conditions

Instructions
1. Create a separate .sh file for each task.
2. Use proper shebang (#!/bin/bash).
3. Take user input wherever required.
4. Display meaningful output messages.
5. Capture screenshots of successful execution.
6. Push all scripts and screenshots to GitHub.

Task 1 – Vote Eligibility Checker
File Name: vote.sh
Read age from user. If age is 18 or above print Eligible to Vote, otherwise print Not Eligible to Vote.

Task 2 – Student Grade Calculator
File Name: grade.sh
Read marks from user.
90+ = A, 75–89 = B, 50–74 = C, Below 50 = Fail.
Use if...elif...else.

Task 3 – Login Validator
File Name: login.sh
Read username. If username is admin print Login Successful else Invalid User.

Task 4 – Salary Checker
File Name: salary.sh
Read salary from user. Salary $\geq$ 50000 $\rightarrow$ High Salary, otherwise Normal Salary.

Task 5 – Empty Input Validator
File Name: environment.sh
Read environment name. If empty print Environment Cannot Be Empty, otherwise print Environment: value. Use -z.

Task 6 – File Checker
File Name: filecheck.sh
Read file name. If file exists print File Found else File Not Found. Use -f.

Task 7 – Directory Checker
File Name: dircheck.sh
Read directory name. If directory exists print Directory Exists else Directory Not Found. Use -d.

Task 8 – Directory Creator
File Name: dircreate.sh
Read directory name. If directory exists print Directory Exists else create directory and print Directory Created.

Task 9 – Disk Usage Monitor
File Name: diskcheck.sh
disk=85. If disk usage > 80 print Warning: Disk Usage High else Disk Usage Normal.

Task 10 – Nginx Command Checker
File Name: service.sh
Check whether nginx command exists. Output Nginx Installed or Nginx Not Installed using command -v nginx.

Task 11 – Working Age Validator
File Name: workingage.sh

Read age from user. If age >= 18 AND age <= 60 print Eligible for Employment else Not Eligible. Use &&.

Task 12 – Admin Access Checker
File Name: access.sh
Read role. If role is admin OR root print Access Granted else Access Denied. Use ||.

Bonus Task (Optional)
File Name: deploycheck.sh
Check if deploy.sh exists. If executable print Deploy Script Ready else add execute permission and print Execute Permission Added. Use -x.

Submission Requirements
1. Create a GitHub repository named day3-shell-conditions.
2. Add all .sh files.
3. Add screenshots of execution.
4. Update README.md with Student Name, Batch, Machine Test Title, List of Tasks, and Screenshots.
5. Commit and push to GitHub.
6. Submit GitHub repository link.
